

LRPB MATADOR (LPB18-4160)

Mid Spring high yield Scepter type with improved canopy and disease resistance

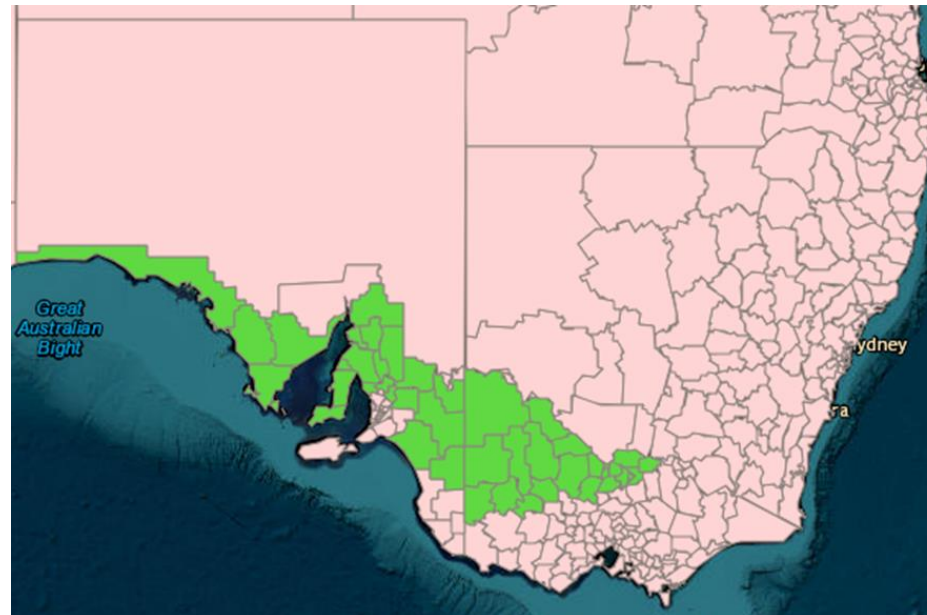

WHEAT

LRPB Matador – Mid Spring high yield Scepter type

- LRPB Matador was developed by LongReach Plant Breeders as a Double Haploid produced from a cross between Scepter and broadly adapted breeding line
- **Mid maturity AH wheat with market leading yield** that has consistently outperformed Vixen and Scepter
- **Improved Powdery Mildew (MS) and Stripe rust resistance (MS) to improve yield security over Scepter** through addition of minor genes for both diseases
- LRPB Matador was tested as LPB18-4160 being first entered into LongReach yield trials in 2018 and NVT trials in 2022

LRPB Matador Minnipa, SA, 2022

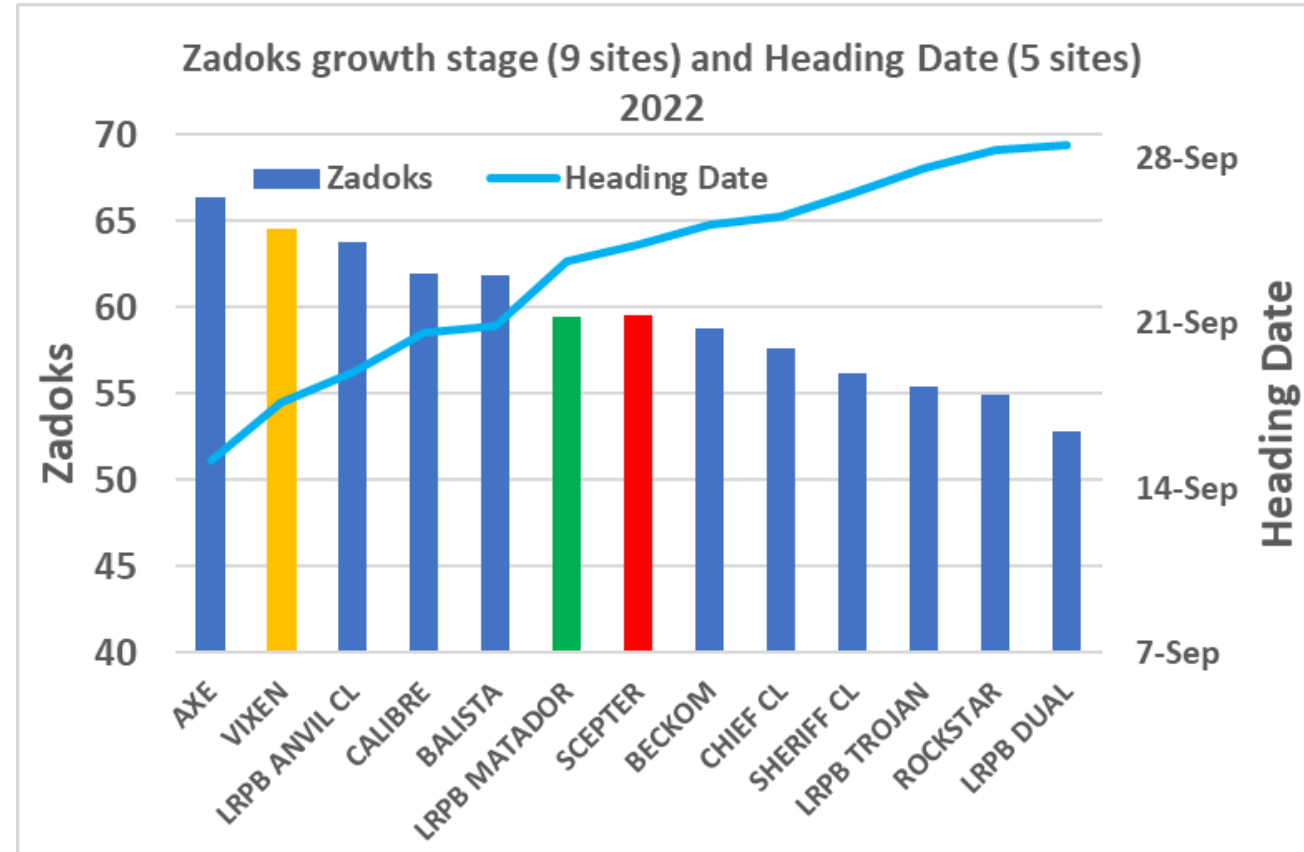

LongReach Southern Breeder
Dr Harpreet Gill

Mid Spring Maturity similar to Scepter

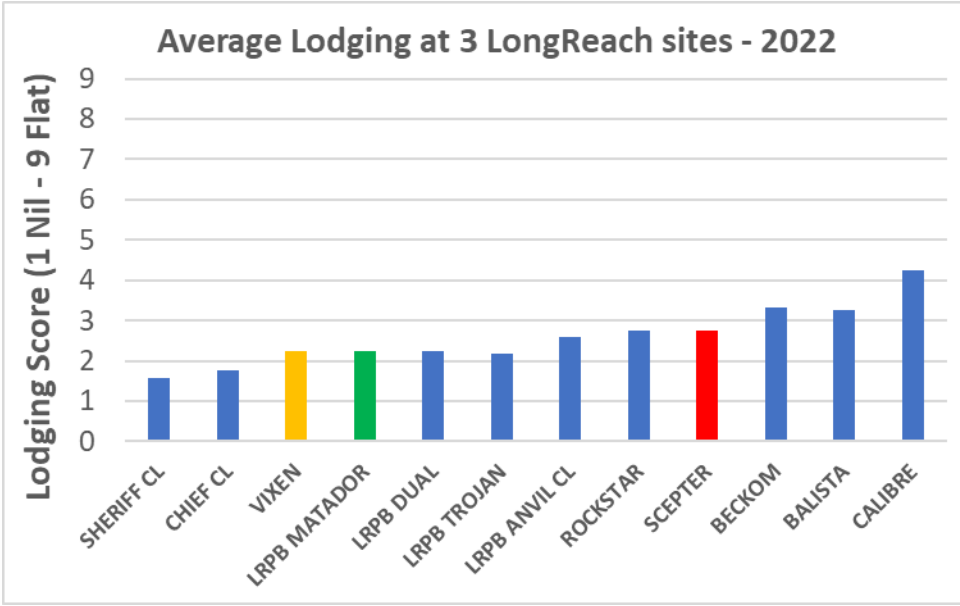

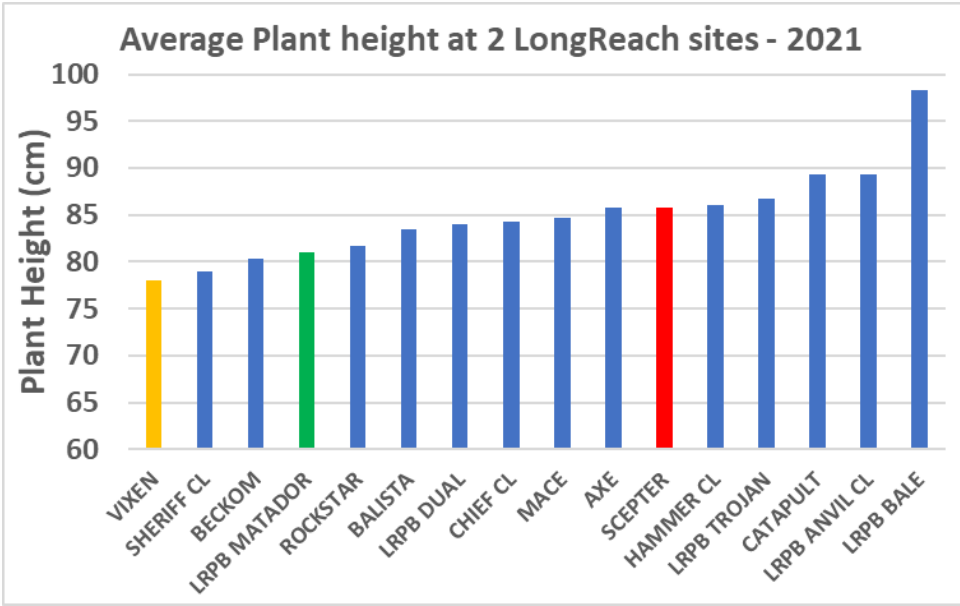

- Mid Spring variety with similar maturity to Scepter with broad adaptation to suit large market area
- LRPB Matador complements quicker varieties like Vixen and Calibre on farm with its maturity well suited to planting earlier in May as growers do with Scepter

LRPB Matador LHS (Mid) vs Calibre (Quick-mid)

Agronomy LRPB Matador

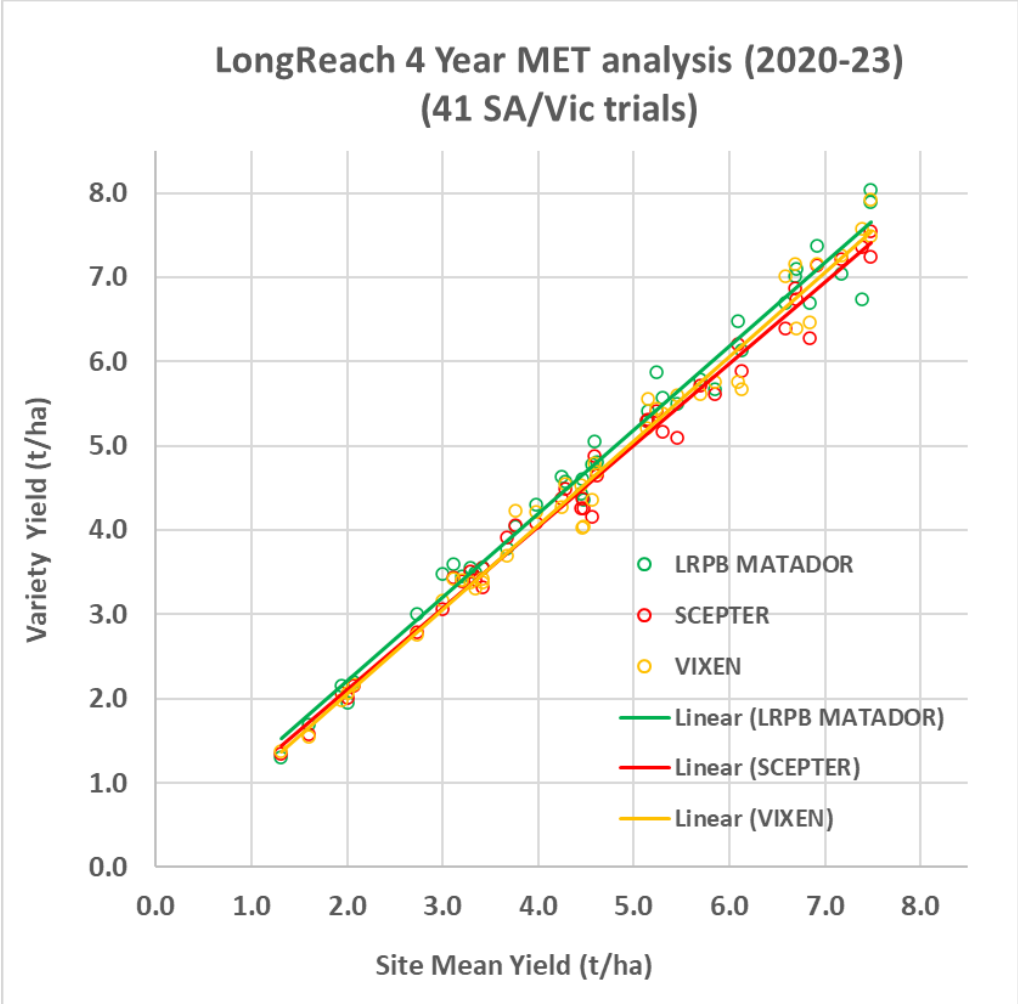

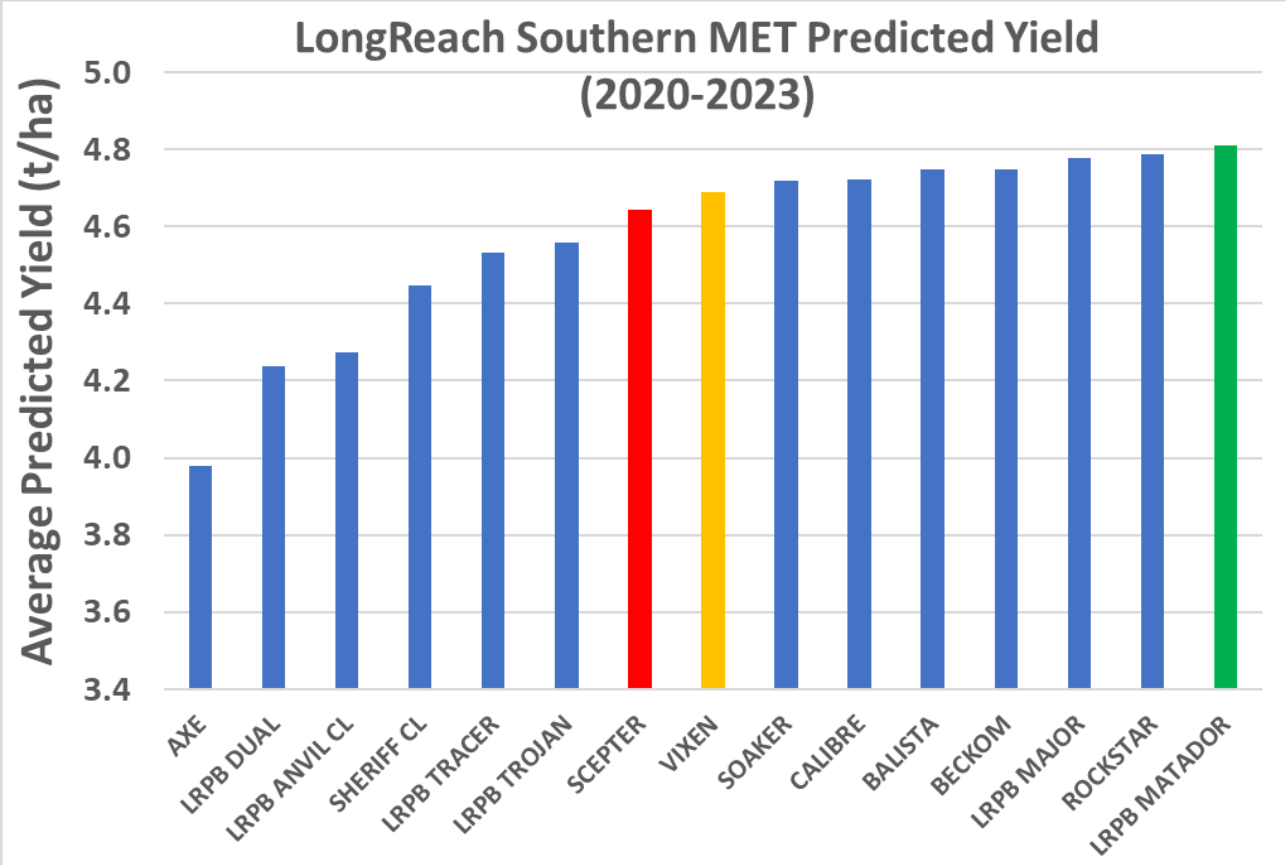

- LRPB Matador shows average vigour with good tillering and steadily builds bulk over the season
- Has 2 reduced height genes (Rht2 and Rht24) to produce a more erect and shorter type than Scepter which can handle both tough conditions and high production
- Lodging tolerance has shown to be better than Scepter and much better than Calibre
- Has tolerance genes for both Boron and Aluminium

LongReach Main Season MET Yield 2020-2023

- Matador has consistently beat Scepter and Vixen in SA and Vic LongReach trials over the last 4 years

LRPB Matador – Long Term high yield over 5 years testing

- In 47 LongReach trials over 5 years (2019-2023) LRPB Matador has consistently out yielded Scepter (85% of trials) and regularly outperformed Vixen (66% of trials)

NVT Main Season MET Yield 2019-2023

NVT MET Predicted Long Term Yield (2019-23) for all SA/Vic Main Season trials as Yield Ranges (% Mean Yield)

- Severe wind gusts over EP SA on 20th November 2019 caused major grain losses
- The LRPB trial was scored for head loss and shattering with LRPB Matador (4.5 t/ha) showing lower losses and out yielding Scepter (3.5 t/ha) by a tonne
- Vixen (4.3 t/ha) stood up well to wind and expanded rapidly in this area, but was still out yielded by LRPB Matador

LRPB Matador available from Modra Seeds Ungarra, SA, 2023

LRPB Matador LHS (6.29 t/ha) vs Scepter RHS (5.97 t/ha) Diggora, SA, 2022

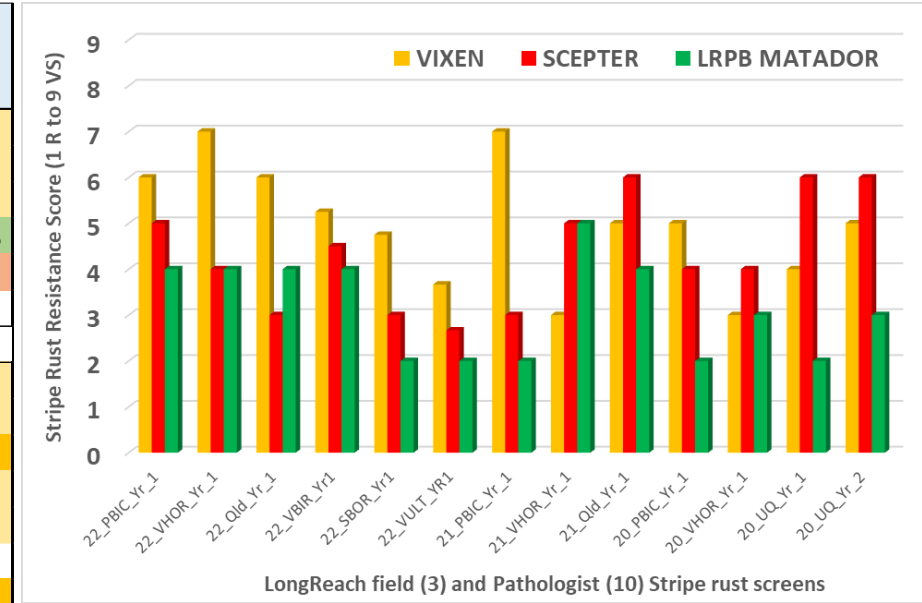

LRPB Matador LHS (6.30 t/ha) vs Scepter RHS (5.88 t/ha) Bordertown, SA, 2021

NVT Ratings 29th Feb 2024 except for ratings from LPB screens for BP/CR (Matador, Major and Soaker) and CCN/Prat thornei Tol. (Soaker) as NVT not available.

May be more susceptible to alternate pathotypes. P Provisional rating.

Comments

- Stripe Rust for LRPB Matador has been rated MS (LongReach and NVT rating) as we have consistently seen a better rating in screens than Scepter (MSS) or Vixen (SVS) with extra APR genes on top of the Scepter reaction type to support fungicides in the paddock
- NVT Powdery rating for LRPB Matador (MS) shows similar level of partial resistance we have seen be effective in reducing the PM pressure in the lower canopy and support fungicide treatments to contain the disease. While not a complete major gene resistance, it is a considerable improvement on the rating of Scepter, Vixen and Rockstar (all SVS) with “removal of suckers” being the strategy promoted by pathologists for PM.

Adult Plant Resistance slows down Stripe Rust– LRPB Matador (MS)

LRPB Matador (LHS) vs Scepter (RHS) Bordertown, SA, 2022

Unsprayed LRPB Matador (LHS) vs Scepter (RHS) BCG Fungicide trial
Kinnabulla, Vic 2023

- Matador (MS) has enough Adult Plant Resistance to Slow down the early development of Stripe Rust to give you more support for fungicides compared to Scepter (MSS)

Pulling back Powdery Mildew– LRPB Matador (MS)

- Pathologists promote replacing susceptible to very susceptible (SVS) suckers with **moderately susceptible (MS) varieties** as the most effective strategy for Powder Mildew
- Fungicide Resistance to Group 3 (DMI) & Group 11 (QoI) products has been **widely documented** in areas of SA/Vic for Powdery Mildew
- New Mildewcides products have been registered on temporary permits for wheat and **combining these with improved varietal resistance** is actively promoted by chemical companies to **ensure their longevity**

- Overall grain quality was around the site average for most traits
- Medium grain size with slightly higher screenings than Scepter
- Sound Test Weight
- Relationship between Yield and Protein was comparable for Matador and Scepter in 2023

LRPB Matador Mid Spring high yield Scepter type with improved canopy and disease resistance
