Stem Browning Rating at Maturity (0 = No Browning, 9 = Heavy Browning)

*2-49 is a public breeding line that has been shown to display high levels of Crown Rot Resistance

LRPB Stealth is the result of a targeted cross to increase Crown Rot Resistance in widely grown APH germplasm. LRPB Stealth has shown increased levels of Crown Rot resistance over well regarded varieties currently available on the market across multiple years when assessed in disease nurseries.

MATURITY

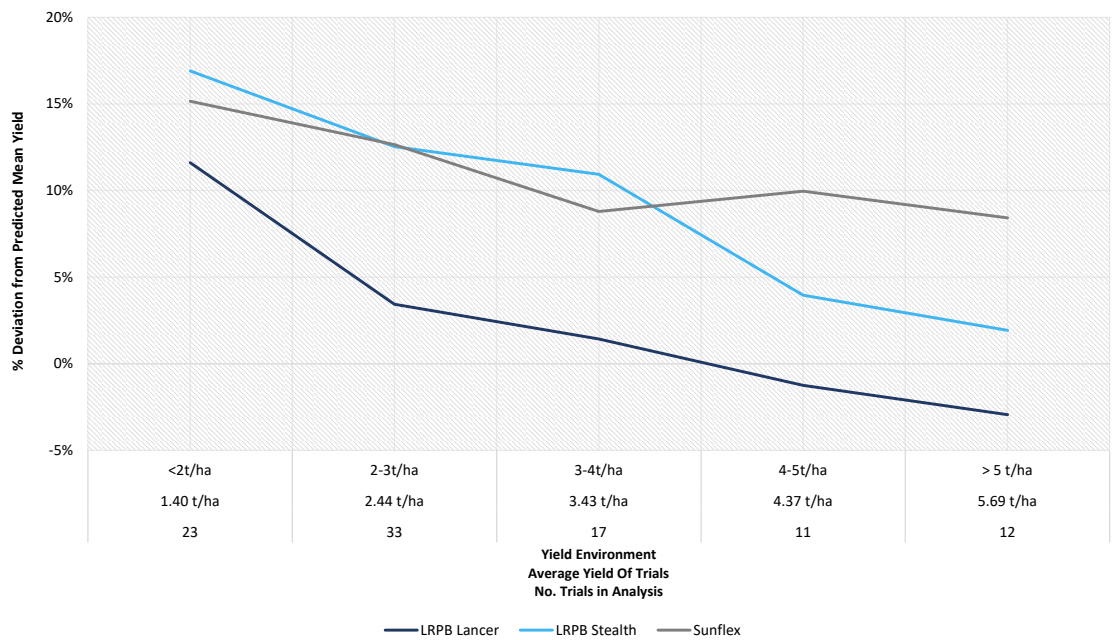

LRPB Stealth has been shown to hold 1-2 days longer to head emergence than Lancer in the warmer Northern environments and quicken itself in the cooler southern environments. This indicates a stronger vernalization requirement than its Lancer parent.
